

WEB TECHNOLOGY AND MOBILE APPLICATION

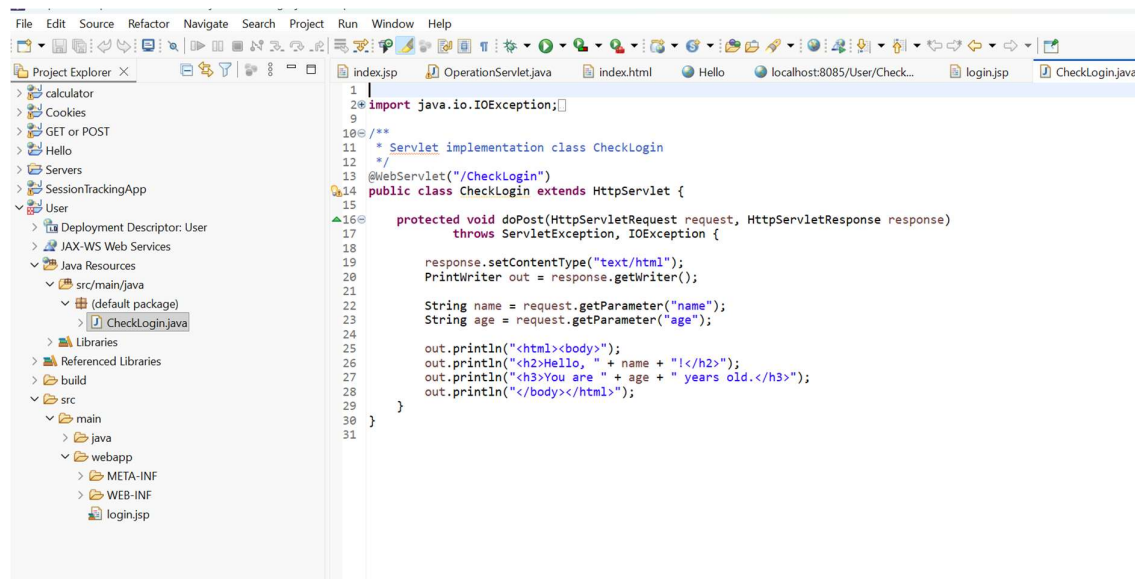

EXPERIMENT 4

Web form that accepts user's name and age

CODE:

```
1
2 <!DOCTYPE html>
3 <html>
4 <head>
5 <meta charset="UTF-8">
6 <title>User Form</title>
7 </head>
8 <body>
9 <h2>User Details Form</h2>
10 <form action="CheckLogin" method="post">
11     Name: <input type="text" name="name" required><br><br>
12     Age: <input type="text" name="age" required><br><br>
13     <input type="submit" value="Submit">
14 </form>
15
16 </body>
17 </html>
```

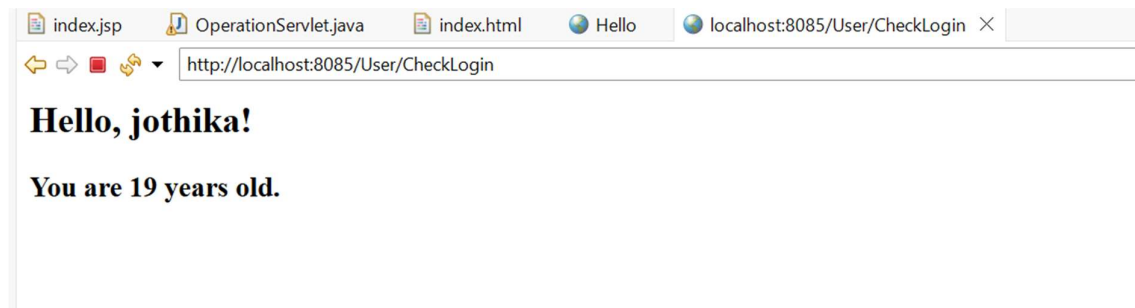

```
1
2 import java.io.IOException;
3
4
5
6
7
8
9
10 /**
11  * Servlet implementation class CheckLogin
12  */
13 @WebServlet("/CheckLogin")
14 public class CheckLogin extends HttpServlet {
15
16     protected void doPost(HttpServletRequest request, HttpServletResponse response)
17         throws ServletException, IOException {
18
19         response.setContentType("text/html");
20         PrintWriter out = response.getWriter();
21
22         String name = request.getParameter("name");
23         String age = request.getParameter("age");
24
25         out.println("<html><body>");
26         out.println("<h2>Hello, " + name + "!</h2>");
27         out.println("<h3>You are " + age + " years old.</h3>");
28         out.println("</body></html>");
29     }
30 }
31
```

OUTPUT:

The screenshot shows a web browser window with the following tabs: index.jsp, OperationServlet.java, index.html, Hello, and User Form. The address bar displays the URL `http://localhost:8085/User/login.jsp`. The main content area features the heading **User Details Form**. Below the heading, there are two input fields: 'Name:' with the value 'jothika' and 'Age:' with the value '19'. A 'Submit' button is located below the 'Age' field.

The screenshot shows the same web browser window after the form submission. The address bar now displays `http://localhost:8085/User/CheckLogin`. The main content area displays the output: **Hello, jothika!** followed by **You are 19 years old.**
