

WEB TECHNOLOGY AND MOBILE APPLICATION

EXPERIMENT 11

Email App

AIM

To develop a mobile application using Android Studio that allows the user to send an email using an installed email client.

STEP 1 – Create New Project

- 1. Open Android Studio**
- 2. Click New Project**
- 3. Select Empty Views Activity**
- 4. Click Next**

STEP 2 – Fill Project Details

Fill exactly as follows:

Field	Value
Name	EmailApp
Package Name	com.example.emailapp
Language	Java
Minimum SDK	API 21

Click Finish

Wait until bottom shows:

Build Successful

STEP 3 – Understand Project Structure

On left side:

Select view as Android

You will see:

app

```
|— java
|   |— MainActivity.java
|— res
|   |— layout
|   |— activity_main.xml
```

STEP 4 – Design User Interface (XML)

Go to:

res → layout → activity_main.xml

Click Code

Delete everything and paste this:

```
<?xml version="1.0" encoding="utf-8"?>

<LinearLayout
xmlns:android="http://schemas.android.com/apk/res/android"
android:orientation="vertical"
android:padding="20dp"
android:layout_width="match_parent"
android:layout_height="match_parent">

<EditText
android:id="@+id/email"
android:hint="Enter Recipient Email"
```

```
android:inputType="textEmailAddress"  
android:layout_width="match_parent"  
android:layout_height="wrap_content"/>
```

```
<EditText  
android:id="@+id/subject"  
android:hint="Enter Subject"  
android:layout_width="match_parent"  
android:layout_height="wrap_content"  
android:layout_marginTop="10dp"/>
```

```
<EditText  
android:id="@+id/message"  
android:hint="Enter Message"  
android:layout_width="match_parent"  
android:layout_height="wrap_content"  
android:layout_marginTop="10dp"  
android:minLines="4"  
android:gravity="top"/>
```

```
<Button  
android:id="@+id/sendButton"  
android:text="Send Email"  
android:layout_width="match_parent"  
android:layout_height="wrap_content"
```

```
android:layout_marginTop="20dp"/>
```

```
</LinearLayout>
```

Press Ctrl + S

STEP 5 – Write Java Logic

Open:

java → com.example.emailapp → MainActivity.java

Delete everything and paste this:

```
package com.example.emailapp;
```

```
import android.content.Intent;
```

```
import android.os.Bundle;
```

```
import android.view.View;
```

```
import android.widget.Button;
```

```
import android.widget.EditText;
```

```
import androidx.appcompat.app.AppCompatActivity;
```

```
public class MainActivity extends AppCompatActivity {
```

```
    EditText email, subject, message;
```

```
    Button sendButton;
```

```
@Override
```

```
protected void onCreate(Bundle savedInstanceState) {
```

```
super.onCreate(savedInstanceState);
setContentView(R.layout.activity_main);

email = findViewById(R.id.email);
subject = findViewById(R.id.subject);
message = findViewById(R.id.message);
sendButton = findViewById(R.id.sendButton);

sendButton.setOnClickListener(new View.OnClickListener() {
    @Override
    public void onClick(View v) {

        String recipient = email.getText().toString();
        String sub = subject.getText().toString();
        String msg = message.getText().toString();

        Intent intent = new Intent(Intent.ACTION_SEND);
        intent.setType("message/rfc822");
        intent.putExtra(Intent.EXTRA_EMAIL, new String[]{recipient});
        intent.putExtra(Intent.EXTRA_SUBJECT, sub);
        intent.putExtra(Intent.EXTRA_TEXT, msg);

        startActivity(Intent.createChooser(intent, "Choose Email Client"));
    }
});
}
```

}

Press Ctrl + S

STEP 6 – Run the Application

- 1. Click Device Manager**
- 2. Create emulator (Pixel 4)**
- 3. Click Green ► Run button**

OR

Connect real Android phone with USB debugging enabled.

OUTPUT

Application displays:

- Recipient Email field**
- Subject field**
- Message field**
- Send Email button**

When user clicks Send Email:

A list of installed email apps appears

(User can choose Gmail, Outlook, etc.)

Selected email app opens with:

- Recipient filled**
- Subject filled**
- Message filled**

User can click Send from email client.
